# PRE-INSTALLATION

## Blender and Freezer Pre-Installation Requirements

f'real is not responsible for costs to ensure pre-installation requirements are met. Please confirm your store meets the following pre-installation requirements to prepare your store for the f'real program.

### Blender Requirements

- 1 Blender is for indoor use only. The operating range for the blender is: 40 to 90 degrees F., with 0 to 100% non-condensing relative humidity.
- 2 Blender requires a dedicated 15 amp, 120 volt circuit. Freezer and any other pieces of equipment should NOT be operated on the same circuit as the blender. (Note: Extension cords are not acceptable and may void warranty due to improper power supply.)
- 3 Blender requires a filtered, non-carbonated water supply that is regulated from 25 to 65 PSI to ensure optimum water flow. Additionally, install a shut-off valve near the blender. Use only new water lines and ensure water connection complies with national/local code.
- 4 Drain line is required near where the blender will be placed. The blender is equipped with 10' of 3/4" ID hose. Drain line must be sloped downward all the way to the drain to provide for free flow of rinse water.
- 5 Follow all applicable national/local electrical and plumbing codes.  
**Note:** If you have purchased a Double Blending Bar, please be aware that you will need an additional plugin.

### FREEZER Requirements

- 1 The freezer unit requires a dedicated 15 amp, 120 volt circuit. (Note: Extension cords are not acceptable and may void warranty due to improper power supply.)
- 2 Follow all applicable national/local electrical codes.

For other equipment-related information, please refer to your **Installation and Operation**
